Neste ReNew lubricants for agricultural and construction equipment – circular economy products based on re-refined base oils

Take a step toward a more sustainable future.

The new Neste ReNew lubricants are a more sustainable choice for agricultural and construction equipment lubrication. They are circular economy products with high-grade base oils re-refined from used lubricating oils. The properties of re-refined base oils are equivalent to conventional base oils. State-of-the-art additives and technology put the finishing touches to the winning quality of Neste ReNew lubricants.

The performance of Neste ReNew lubricants is equivalent to or better than similar conventional lubricants. Neste ReNew lubricants for heavy-duty equipment can replace most equivalent lubricants, making them easy to adopt.

Choose Neste ReNew lubricants to save natural resources and reduce our dependence on crude oil – without compromising an ounce of lubrication or performance.

Neste ReNew lubricants for agricultural and construction equipment are available in barrels and 20-liter pails.

Neste ReNew STOU 10W-30

More sustainable universal lubricant for tractors (Super Tractor Oil Universal, STOU).
